Title: On Stetkær type functional equations and Hyers–Ulam stability

Author(s): Bouikhalene Belaid and Elqorachi Elhoucien

Let \( G \) be a locally compact group, \( K \) a compact subgroup of morphisms of \( G \), \( \chi: K \to \{z \in \mathbb{C} \mid |z| = 1\} \) a continuous homomorphism and \( \mu \) a \( K \)-invariant bounded measure on \( G \). In this paper we study functional equations of the form

\[
\int_{G} \int_{K} f(xtk \cdot y) \chi(k) dk d\mu(t) = g(x)h(y), \quad x, y \in G,
\]

in which \( f, g, h \in C_b(G) \) are unknown functions. These equations may be viewed as a generalization of the functional equations considered by Stetkær in many of his works. We show how the solutions \( g \) and \( h \) are closely related to the solutions of Badora’s functional equation solved in [4] and [13]. We treat examples and we give some applications. The case where \( G \) is a Lie group is considered. Furthermore, we investigate the Hyers–Ulam stability problem of these functional equations.
