Title: A new class of projectively flat Finsler metrics in terms of hypergeometric functions

Author(s): Libing Huang and Xiaohuan Mo

In this paper, we study a class of Finsler metrics in the form $F(x, y) = |y| \phi(|x|, \frac{(x, y)}{|y|})$. We obtain the second-order differential equation for $F$ to be projectively flat and manufacture new projectively flat Finsler metrics on an open subset in $\mathbb{R}^n$ using hypergeometric functions. We also express $F$ in terms of elementary functions in some special cases.
