Title: Characterization of projective Finsler manifolds of constant curvature having infinite dimensional holonomy group

Author(s): Zoltán Muzsnay and Péter T. Nagy

In this paper we prove that the holonomy group of a simply connected locally projectively flat Finsler manifold of constant curvature is a finite dimensional Lie group if and only if it is flat or it is Riemannian. In particular, the holonomy group of non-Riemannian projective Finsler manifolds of nonzero constant curvature is infinite dimensional.
