Title: A regularity condition for quadratic functions involving the unit circle

Author(s): Zoltán Boros, Włodzimierz Fechner and Péter Kutas

We prove that if $f: \mathbb{R} \to \mathbb{R}$ is additive or quadratic and the mapping $\mathbb{R}^2 \ni (x, y) \to f(x)f(y)$ is bounded on a non-degenerated arc of the unit circle, then $f$ is continuous, i.e. $f(x) = cx$ for all $x \in \mathbb{R}$ or $f(x) = cx^2$ for all $x \in \mathbb{R}$, respectively, with some real coefficient $c$.
