Title: Some results concerning symmetric generalized skew biderivations on prime rings

Author(s): Luisa Carini, Vincenzo De Filippis and Giovanni Scudo

Let $R$ be a ring. A biadditive symmetric mapping $D : R \times R \rightarrow R$ is called a symmetric skew biderivation if for every $x \in R$, the map $y \mapsto D(x,y)$ is a skew derivation of $R$ (as well as for every $y \in R$, the map $x \mapsto D(x,y)$ is a skew derivation of $R$).

Let $D : R \times R \rightarrow R$ be a symmetric biderivation. A biadditive symmetric mapping $\Delta : R \times R \rightarrow R$ is said to be a symmetric generalized skew biderivation if for every $x \in R$, the map $y \mapsto \Delta(x,y)$ is a generalized skew derivation of $R$ associated with $D$ (as well as for every $y \in R$, the map $x \mapsto \Delta(x,y)$ is a generalized skew derivation of $R$ associated with $D$).

In this paper we study some commutativity conditions for a prime ring $R$ related to the behaviour of the trace of symmetric generalized skew biderivations of $R$.
