

**Title:** A generalization of Menon's identity to higher exponent

**Author(s):** Yan Li, Daeyeoul Kim and Rui Qiao

In this note, we shall explicitly compute the following sum

$$\sum_{\substack{1 \leq a, b_1, \dots, b_k \leq n \\ \gcd(a, n) = 1}} \gcd(a^\ell - 1, b_1, \dots, b_k, n),$$

where  $n \geq 1$ ,  $k \geq 0$ ,  $l \geq 1$  are integers. Our results extend Menon's identity and Sury's identity (i.e.,  $l = 1$  in the above summation) to higher exponents. Note that in the case  $k = 0$ , some of our results are recovered by the results of [21].
