

S -unit values of $G_n + G_m$ in function fields

By SEBASTIAN HEINTZE (Graz)

Abstract. In this paper, we consider a simple linear recurrence sequence G_n defined over a function field in one variable over the field of complex numbers. We prove an upper bound on the indices n and m such that $G_n + G_m$ is an S -unit. This is a function field analogue of already known results in number fields.
