

**Title:** On continuous solutions and stability of a conditional Gołęb–Schinzel equation

**Author(s):** Nicole Brillouët-Belluot and Janusz Brzdek

We determine the continuous solutions  $f : \mathbb{R} \rightarrow \mathbb{R}$  of the functional equation

$$f(x + f(x)y)f(x)f(y)[f(x + f(x)y) - f(x)f(y)] = 0 \quad (x, y \in \mathbb{R}).$$

We also give some remarks on nonstability of the Gołęb–Schinzel equation.
