Title: Characterizations of strong and statistical convergences

Author(s): Mohammad Kazim Khan and Cihan Orhan

The two main objectives of the paper are to cast the concept of A -uniform integrability in the measure-theoretic sense leading to showing that a sequence is A -strongly convergent if and only if it is A -statistically convergent and it is A -uniformly integrable. The second aim is to give an almost all subsequence characterization of A -statistical convergence.
