Title: Two generator p -groups of nilpotency class 2 and their conjugacy classes

Author(s): Azhana Ahmad, Arturo Magidin and Robert Fitzgerald Morse

We give a classification of 2-generator p -groups of nilpotency class 2. Using this classification, we give a formula for the number of such groups of order p^n in terms of the partitions of n of length 3, and find formulas for the number and size of their conjugacy classes.
