Title: On functional equations involving means
Author(s): Zoltán Daróczy
Let $I \subset \mathbb{R}$ be a non-void open interval and let $M, N: I^{2} \rightarrow I$ be two mean values on $I$. We consider functional equations of type

$$
K(M(x, y))=K(N(x, y)) \quad(x, y \in I)
$$

where $K: I \rightarrow \mathbb{R}$ is an unknown function.
