Title: Partial representation of partial twisted smash products

Author(s): Shuangjian Guo, Shengxiang Wang and Long Wang

In this paper we first give the sufficient conditions under which a partial twisted smash product algebra and the usual tensor product coalgebra become a bialgebra. Furthermore, we introduce the notion of partial representation of partial twisted smash products and explore its relationship with partial actions of Hopf algebras. Finally, we give the conditions for the partial twisted smash products to be Frobenius.
