Title: Exponential dichotomies in average for flows and admissibility

Author(s): Luis Barreira, Davor Dragičević and Claudia Valls

For a measurable cocycle over a flow or a semiflow acting on L^1 functions, we consider the general notion of an exponential dichotomy in average, and we characterize it in terms of an admissibility property. As a nontrivial application, we establish in a simple manner the robustness of the notion under sufficiently small linear perturbations, both for cocycles over a flow and a semiflow.
