Title: On class-preserving Coleman automorphisms of semidirect products of finite nilpotent groups by finite groups

Author(s): Jinke Hai and Shengbo Ge

Let G be a semidirect product of a finite nilpotent group by a finite group. It is shown that under some conditions class-preserving Coleman automorphisms of 2-power order of G are inner. Interest in such automorphisms arose from the study of the normalizer problem for integral group rings.
