Title: Computing singularities of the spectra of representation rings of finite groups

Author(s): André Gimenez Bueno, Renato Vidal Martins, Edney Oliveira and Csaba Schneider

Let G be a finite group of order n , and ξ an n -th primitive root of unity. Consider the affine scheme $C := \text{Spec}(\mathbb{Z}[\xi] \otimes_{\mathbb{Z}} R(G))$, where $R(G)$ is the representation ring of G . We study the fibers of the formal tangent sheaf of C by computing their dimension and also finding (and measuring) the singularities of C . We present explicit computations for noncommutative groups of small order, and develop practical methods to compute these invariants for an arbitrary finite group.
