**Title:**  $S$ -unit values of  $G_n + G_m$  in function fields

**Author(s):** Sebastian Heintze

In this paper, we consider a simple linear recurrence sequence  $G_n$  defined over a function field in one variable over the field of complex numbers. We prove an upper bound on the indices  $n$  and  $m$  such that  $G_n + G_m$  is an  $S$ -unit. This is a function field analogue of already known results in number fields.
