Title: Equidistribution of elements of norm 1 in cyclic extensions

Author(s): Kathleen L. Petersen and Christopher D. Sinclair

Upon quotienting by units, the elements of norm 1 in a number field K form a countable subset of a torus of dimension $r_1 + r_2 - 1$, where r_1 and r_2 are the numbers of real and pairs of complex embeddings. When K is Galois with cyclic Galois group we demonstrate that this countable set is equidistributed in a finite cover of this torus with respect to a natural partial ordering induced by Hilbert's Theorem 90.
