Title: Characterizations of Riemannian maps between Kaehler manifolds by certain curves

Author(s): Tunahan Turhan, Gözde Özkan Tükel and Bayram Şahin

Riemannian maps between Kaehler manifolds are studied with respect to certain curves. For this purpose, the geometric properties of the Riemannian maps themselves, the total manifold and the base manifold are investigated depending on the behavior of the geodesic, circle and Kaehler Frenet curves on the total manifold under Riemannian maps.
