**Title:** Left-invariant nearly pseudo-Kähler structures and the tangent Lie group

**Author(s):** David N. Pham

Let  $G$  be a Lie group, and let  $(g, J)$  be a left-invariant almost pseudo-Hermitian structure on  $G$ . It is shown that if  $(g, J)$  is also nearly pseudo-Kähler, then the tangent bundle  $TG$  (with its natural Lie group structure induced from  $G$ ) admits a left-invariant nearly pseudo-Kähler structure.
