Title: A weighted Hermite–Hadamard-type inequality for convex-concave symmetric functions

Author(s): Péter Czinder

In this paper we give a weighted version of the Hermite–Hadamard inequality

$$f\left(\frac{a+b}{2}\right) \underset{(\leq)}{\overset{\geq}{\geq}} \frac{1}{b-a} \int_a^b f(x)dx \underset{(\leq)}{\overset{\geq}{\geq}} \frac{f(a)+f(b)}{2}.$$

An extension of that result, applied for convex-concave symmetric functions, will also be provided.
