

**Year: 2006****Vol.: 68****Fasc.: 3-4****Title:** A new formula for the convexity coefficient of Orlicz spaces**Author(s):** Liu Li Fang and Henryk Hudzik

In [2], a formula for the convexity coefficient of Orlicz spaces $L_M, \varepsilon_0(L_M)$, equipped with the Luxemburg norm, in the case of a non-atomic and infinite measure space, has been given in terms of some parameter depending on the generating Orlicz function M . In this paper, we explain this formula in terms of a parameter $\beta(p)$ depending on the right derivative of M . We also give a way how to compute the parameter $\beta(p)$, which is more convenient when we look for an Orlicz function M giving concrete value of $\varepsilon_0(L_M)$.
