Title: Fiberings on almost r -contact manifolds

Author(s): LOVEJOY S. DAS

The differentiable manifolds with almost contact structures were studied by many authors, for example: D. E. BLAIR [5], S. SASAKI [6], S. I. GOLDBERG and K. YANO [7], S. ISHIHARA [8], and others.

The purpose of this paper is to study strictly regular invariant r -contact manifolds related to an almost r -contact structure. This structure induces a principal bundle whose base manifold bears an almost complex structure. This paper is devoted to study the relations between the integrability conditions of almost r -contract structure and the induced complex structure. The motivation of this paper is to extend some results obtained by K. OGUIE [4].
