Title: On mininjective and min-flat modules

Author(s): Lixin Mao

A left R -module M is said to be mininjective if $\text{Ext}^1(R/I, M) = 0$ for any simple left ideal I of R . A ring R is called left min-coherent in case each simple left ideal of R is finitely presented. It is shown that every left R -module over a left min-coherent ring R has a mininjective cover. We also give some new characterizations of left FS rings, left PS rings and left universally mininjective rings.
