Title: Beta-continued fractions over Laurent series

Author(s): Manel Jellali, Mohamed Mkaouar, Klaus Scheicher and Jörg M. Thuswaldner

The present paper is devoted to a new notion of continued fractions in the field of Laurent series over a finite field. The definition of this kind of continued fraction algorithm is based on a general notion of number systems. We will prove some ergodic properties and compute the Hausdorff dimensions of bounded type continued fraction sets.
