Title: A uniqueness theorem for meromorphic maps with moving hypersurfaces

Author(s): Gerd Dethloff and Tran Van Tan

In this paper, we establish a uniqueness theorem for algebraically nondegenerate meromorphic maps of $\mathbb{C}^m$ into P^n and slowly moving hypersurfaces $Q_j \subset P^n$, $j = 1, \dots, q$ in (weakly) general position, where q depends effectively on n and on the degrees d_j of the hypersurfaces Q_j .
