Title: Proportionally modular numerical semigroups with embedding dimension three

Author(s): Aureliano M. Robles-Pérez and José Carlos Rosales

In this paper we study numerical semigroups, generated by three positive integers, that are the set of solutions of a Diophantine inequality of the form $ax \bmod b \leq cx$. As a consequence, we show that, if these numerical semigroups are irreducible (this is, symmetric or pseudo-symmetric), then they are the set of solutions of a Diophantine inequality of the form $\alpha x \bmod \beta \leq x$.
