Title: On the Gauss map of minimal Lorentzian surfaces in 4-dimensional semi-Riemannian space forms with index 2

Author(s): Elif Özkara Canfes and Nurettin Cenk Turgay

In this paper, we study minimal Lorentzian surfaces with finite type Gauss map in 4-dimensional semi-Riemannian space forms with index of 2. First, we give the complete classification of Lorentzian surfaces in the semi-Euclidean space $\mathbb{E}_2^4$ with pointwise 1-type Gauss map. Then, we study all Lorentzian minimal surfaces in $\mathbb{S}_2^4(1)$ regarding their Gauss map. In particular, we proved that a Lorentzian minimal surface in $\mathbb{S}_2^4(1)$ has 2-type Gauss map if and only if it has constant Gaussian curvature and non-zero constant normal curvature.
