Title: Two-sided norm estimate for the Bergman projection on the Besov space in the unit ball in $\mathbb{C}^n$

Author(s): Djordjije Vujadinović

We find an upper and lower estimate bound for the norm of the Bergman projection on the Besov space B_p in the unit ball in $\mathbb{C}^n$. We correct and generalize the existing results in the one-dimensional case from [12]. The obtained upper bound is asymptotically sharp for $p \rightarrow +\infty$ in correspondence to the result from [6]. Also, some related inequalities are included.
