On a question of Navarro and Wolf

By YANG LIU (Tianjin) and YONG YANG (San Marcos)

Abstract. In this note, we answer a question raised by Navarro and Wolf in [4]. We show that if P is a Sylow p-subgroup of a finite group G where p is an odd prime, then $G' \cap N_G(P) \subseteq P$ if and only if p divides the degree of every irreducible non-linear p-Brauer character of G.
